

1. The first of these is the
fact that the population of
the United States is increasing
at a rapid rate. This is due
to a number of causes, the
most important of which are
the increase in the birth rate,
the decrease in the death rate,
and the immigration of large
numbers of people from foreign
countries. The result of this
increase in population is that
the demand for land is
increasing rapidly. This is
true of all countries, but
it is especially true of the
United States, where the
population is increasing at
a rate of about one per cent
per year. This means that
in ten years the population
will be increased by ten per
cent. This is a very large
increase, and it is one that
will have a very important
effect on the country. It will
mean that more land will be
needed for the support of the
population, and this will
lead to a great deal of
land being taken from the
public domain. This is a
very serious matter, and it
is one that should be
given the most careful
consideration. It is the
responsibility of the
government to see that the
public domain is protected
and that the land is used
in a wise and economical
manner. It is the duty of
the government to see that
the land is not wasted, and
that it is used for the
benefit of the people. This
is a very important task,
and it is one that should
not be neglected. The
government should take
steps to prevent the
waste of land, and it
should see that the land
is used in a way that will
benefit the people. This is
the responsibility of the
government, and it is one
that should not be
ignored. The government
should take steps to
prevent the waste of land,
and it should see that the
land is used in a way that
will benefit the people. This
is the responsibility of the
government, and it is one
that should not be
ignored.
